#### **NBC News: Climate News**

# Climate change

"Climate change refers to long-term shifts in temperatures and weather patterns. These shifts may be natural, such as through variations in the solar cycle. But since the 1800s, human activities have been the main driver of climate change, primarily due to burning fossil fuels like coal, oil and gas."

(https://www.un.org/en/climatechange/what-is-climate-change)

1	Watch the Youtube video and tick the
	correct answers:
	The video is about:

- O Rising global temperatures
- worse winter snowstorms
- O warmer weather and less snowstorms
- O climate change

## ্ট্ৰ Viewing skills

- remember to read all the tasks and answers carefully before watching
- it doesn't matter when you do not understand everything, try to get the main information

#### ② Watch it again and fill in the gaps with the correct words.

carbon dioxide 2x	feel 1x	fuels 1x	gase	s 1x	in Boston 1x	increase 1x			
methane 2x									
The meteorologist say	ys that w	e cannot ac	tually		global warming.				
Warmer air and ocea		the available moisture.							
The oceans are the	for hurricanes and cold storms.								
The top ten snowstor	have occurred in the last 25 years.
