

TEDx-Talk by Adriana Galván (2013) – Insight into the teenage brain

① Tick whether the following statements are true or false.

	TRUE	FALSE
Our brain is fully matured by the age of 18		
The teenage brain is very sensitive to reward.		
The last region of the brain to develop is the pre-frontal cortex.		
When dopamine is released in the brain, we become sad.		
The speaker's experiment included feeding people sugar.		
The teenagers were more reactive to money, because they have less of it.		

② Name the function of adolescence that the speaker mentions.

③ Name two of the functions of the pre-frontal cortex.

④ Name two of the advantages of how the adolescent brain is structured.
